

ThermalSmart

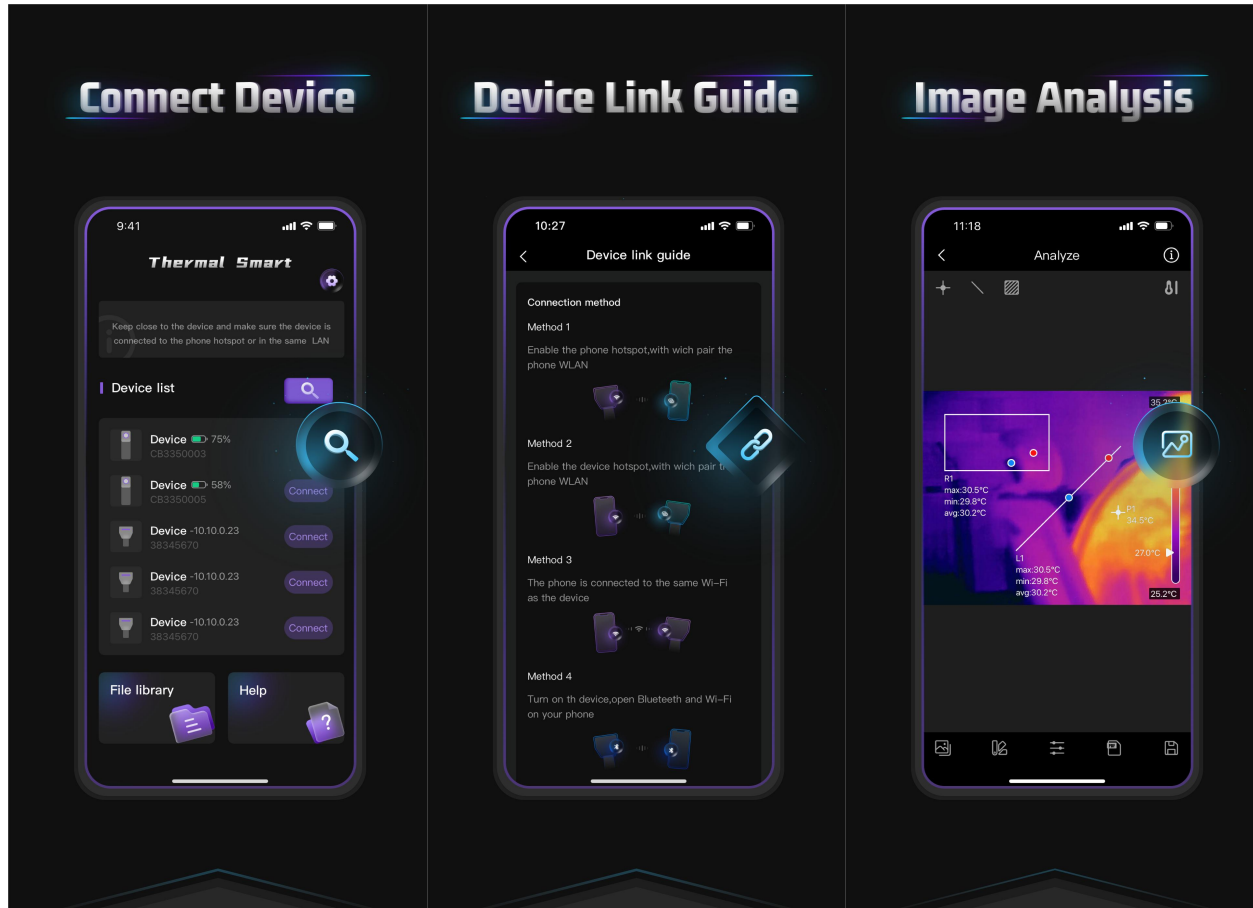

ThermalSmart APP connects to infrared thermal imagers via wireless network, providing thermal image preview, supporting thermal image analysis and report generation. It is suitable for applications in power, industrial, and maintenance fields, simplifying workflows and enhancing work efficiency.

Four Connection Methods

- Device Shares Hotspot, Phone Connects to Device
- Phone Shares Hotspot, Device Connects to Phone
- Device and Phone Connect to the Same Wi-Fi
- Enable Bluetooth for Auxiliary Connection

ThermalSmart

- **Real-time Preview**

After connecting the device, users can view real-time footage and perform remote control operations, facilitating distant monitoring with ease.

- **Thermal Image Analysis**

Supports over a dozen palette modes for richer imagery; provides various temperature analysis tools including points, lines, and areas, meeting diverse **analytical needs**.

- **File Transfer & Management**

Upon connection, download device images to your smartphone. Offers management of images and temperature measurement reports, with a one-click sharing feature.
